

ENTERPRISE SEO & CONTENT AUDIT

Selkey Cyber Security Pvt Ltd

A full-site technical SEO, content-quality, media and design assessment of **selkeycybersecurity.com**, benchmarked against enterprise-grade B2B cybersecurity websites — with a prioritised remediation roadmap.

DOMAIN

selkeycybersecurity.com

AUDIT DATE

3 July 2026

SCOPE

87 URLs · 43 service pages · all media

PLATFORM

WordPress · Elementor · Yoast · LiteSpeed

METHOD

Full crawl · rendered inspection · media probe

OVERALL GRADE

C+ (62 / 100)

The commercial engine — 43 service pages — is genuinely strong and recently optimised. What holds the site back from looking enterprise-grade is everything *around* it: leftover theme demo content, a heavy un-optimised media layer, thin hub/parent pages, and no informational content to win search demand.

43

SERVICE PAGES, MOSTLY
UNIQUE & WELL-WRITTEN

~45

JUNK / DEMO URLs INDEXABLE
& IN SITEMAP

35 MB

IMAGE PAYLOAD · 604 LEGACY-
FORMAT FILES

Category scorecard

Top 5 issues to fix first

#	ISSUE	IMPACT	EFFORT
1	~45 theme-demo & template URLs are indexable and in the sitemap (headers, footers, mega-menus, fake "IT projects").	Critical	Low
2	No real /services/ hub page — the nav link redirects to a menu template.	Critical	Medium
3	Media layer is 35 MB; a 1.9 MB animated GIF is the logo & social image; 604 legacy-format files.	High	Medium
4	Zero blog / informational content — no way to capture top-of-funnel search demand.	High	High
5	6 category & About pages are thin (100–142 words) and read like a template.	High	Medium

What's already good: unique keyword-aware titles & descriptions on all service pages; valid Organization / ProfessionalService / Breadcrumb schema; HTTPS + HSTS + security headers; Brotli + LiteSpeed cache; correct canonicals; clean 404s; no mixed content; a contact form and CTA on every service page.

§2 Technical SEO & crawl hygiene

Passing checks

HTTPS + HSTS (1 yr)	Pass
Canonical tags	Pass
robots.txt + sitemap ref	Pass
http/www → https 301	Pass
Brotli compression	Pass
LiteSpeed full-page cache	Pass
Custom 404 (returns 404)	Pass
Security headers (XFO, XCTO)	Pass
No mixed content	Pass

Needs attention

Index bloat (~45 junk URLs)	Critical
Nav "Services" → template	Critical
Internal links via 301 hops	Medium
og:locale / lang = en_US (serves IN)	Medium
PHP version exposed in header	Medium
Double redirect hop (http/www)	Low
No GA4 / Search Console tag*	Medium

*Google Site Kit plugin is present but no GA4 measurement ID or verification tag was found in the rendered homepage — confirm analytics is actually firing.

Index bloat — the single biggest technical problem

Of **87 URLs** in the XML sitemap, only ~9 marketing pages and 43 service pages should be indexed. The rest are theme internals that all return 200 with `index, follow`, no H1 and no meta description:

URL PATTERN	COUNT	EXAMPLE	ACTION
Header / footer templates	10	/header-footer/footer-four/	noindex + drop
Theme demo "projects"	~17	/project/mobile-app-design/	Delete
Demo project categories	5	/project-category/marketing/	noindex
Mega-menu templates	3	/th-mega-menu/services/	noindex + drop
ElementsKit widget content	4	/elementskit-content/...widget.../	noindex + drop

One demo page is a literal duplicate: `/project/...public-sector-organizations-copy/`. Google's site-quality systems judge a domain holistically — when ~half the indexable pages are empty templates titled "Footer Four", it suppresses the pages that matter and wastes crawl budget. A ready-made `mu-plugin` that fixes this automatically ships in the accompanying `seo-fixes/` folder.

§3 Service-page content audit

All 43 service pages were fully crawled and their main content (excluding nav/footer) measured. The good news: they are genuinely unique — only 4 short sentences repeat as boilerplate across pages. The gap is a cluster of thin parent/category pages.

36

PAGES ≥ 350 WORDS
(ADEQUATE–STRONG)

6

CATEGORY PAGES THAT ARE
THIN (≤ 142 WORDS)

4.8★

CITED RATING — BUT SEE
TRUST CONFLICT, §6

Thinnest pages — rewrite priority

SERVICE / CATEGORY PAGE	BODY WORDS	STATUS	NOTE
Security Assessment Services & OT typo in slug	100	Thin	These six are the parent pages linked from the homepage — the first thing a buyer clicks. They're ~2 sentences + a service list. Expand each to 500–700 words: what the family covers, who it's for, methodology, outcomes, links to child services.
Compliance	102	Thin	
Managed Cyber Security Services	107	Thin	
Specialized Services	107	Thin	
Digital Forensic & Incident Response	117	Thin	
Vulnerability Assessment & Pen Testing (parent)	142	Thin	
Disk Forensic & Imaging	325	Below par	Bring to ≥400 words; add process + deliverables.
OT / ICS Cyber Security Assessment	329	Below par	21 images but light text — rebalance.

Strongest pages (keep as the quality bar)

ISO 27001 (1,183 words), Thick-Client VAPT (1,111), GDPR (1,084), DPDPA (1,034), API VAPT (952), Active Directory (922). These have proper H1→H2→H3 structure, methodology, test cases, benefits and FAQs — this is the template every other service page should match.

Content issues that repeat across pages:

- Duplicate H2s** — e.g. "Benefits of Web Application Penetration Testing" appears twice on the same page (Elementor block duplicated).
- Grammar/typos baked into indexed titles & slugs** — "Assesment", "readness", "SOC as a Services", "Code IOT", "Honest Ethical Hacker".
- Trust-number conflict** — "4.8★ by 144 clients" (meta + schema) vs "765+ Happy Clients" (homepage counter).

- **Leftover IT-template copy on the homepage** — "We Provide the best Information Technology Solutions service", "How To Work It!", and the testimonial heading **"From Encryption to Freedom" repeated 7×**.

§4 Image & media audit — what to change

The media layer is the site's heaviest performance and polish liability. Every unique uploaded image (631 files) was probed for real byte-size and format.

35 MB

TOTAL UNIQUE IMAGE
PAYLOAD

604

LEGACY JPG/PNG/GIF (33 MB)
— NOT NEXT-GEN

41

IMAGES OVER 200 KB EACH

Priority replacements (largest / most damaging)

FILE	SIZE	TYPE	WHY IT MUST CHANGE
Selkey-Logo-White-GIF-1.gif	1.9 MB	GIF	Critical Used as logo and og:image. Animated GIFs break LinkedIn/WhatsApp/FB previews. Replace with SVG logo + a static 1200×630 social image.
About-Us-1700-x-1120.jpg	602 KB	JPG	Hero image far larger than needed. Resize to display size, convert to WebP (<100 KB).
76.jpg · 279.jpg · 45-1.jpg	~590 KB	JPG	Content/section images at 500–600 KB each. Compress + WebP.
circle_engine_2.webp	458 KB	WebP	Even the WebP decorative assets are oversized — re-export smaller.
2.jpg · 155.jpg · 158.jpg · 140-1.jpg	370–385 KB	JPG	Repeated across service pages; compress in bulk.

Systemic media actions

- **Missing alt text:** on the homepage alone, **97 of 100 images** have empty/absent `alt`. This is both an accessibility failure and lost image-search traffic. Do an alt pass across all pages (decorative shapes may keep empty alt).
- **Convert to next-gen formats:** 604 files (33 MB) are JPG/PNG/GIF. Enable WebP/AVIF delivery — LiteSpeed Cache has built-in image optimisation + WebP; turn it on and run "Optimize" on the whole library. Expect a 60–80% payload cut.
- **Resize to display dimensions:** several images are served far larger than their rendered size (e.g. a 1700×1120 hero). Serve responsive sizes.
- **Lazy-load below-the-fold** images and the decorative "engine/shape" assets.
- **Logo as SVG:** a security brand's logo should be a crisp scalable SVG, not a 1.9 MB raster GIF.

Quick win: LiteSpeed Cache → Image Optimization → enable "Auto Request Cron", "Optimize Original Images", "Create WebP Versions" → then *Send Optimization Request*. This single toggle addresses most of the 33 MB legacy payload with no manual re-uploading.

§5 Enterprise-grade appearance

Benchmarked against how buyers expect a serious B2B cybersecurity vendor's site to look and read. The bones are fine; the credibility gaps come from a generic IT theme showing through and weak proof.

Where it reads as "template", not "enterprise"

Generic IT-agency theme is visible TechCo theme

The site runs a stock ThemeForest "IT solutions" theme. Its demo artefacts survive in production: fake portfolio "projects" (Mobile App Design, Dashboard Design, "Driving Digital Transformation..."), IT-agency headings, and stock imagery. Enterprise buyers recognise these instantly.

Fix: delete all demo projects; replace IT-theme copy with cybersecurity-specific messaging; swap stock graphics for real SOC / team / certificate imagery.

Thin, proof-light About page

~409 words. No founding-story specifics, no named leadership, no certifications listed (despite service pages citing OSCP/CEH/CPENT), no client logos, no "since 2022". This is the page enterprise procurement checks first.

Fix: add leadership bios + photos, certifications & partner badges, founding year, headline stats (clients, engagements, industries), and 2–3 client logos.

Repetitive, low-credibility testimonials

Seven testimonials all carry the identical heading "From Encryption to Freedom". Repetition reads as filler, not social proof.

Fix: use a unique one-line result as each heading (e.g. "Cleared our SEBI CSCRF audit first time"), name + role + company, and a logo where permitted.

No case studies / proof of outcomes

The `/project/` section holds theme demos, not real engagements. Enterprise buyers look for anonymised case studies (problem → approach → outcome).

Fix: publish 3–5 real (anonymised) case studies with measurable results; retire the demo projects.

Mobile experience unverified & heavy

The homepage ships 42 external scripts, 33 stylesheets and a 35 MB media library — a real INP/LCP risk on mobile, where most Indian B2B research traffic lands. Viewport, favicon and apple-touch-icon are correctly present.

Fix: reduce script/style count (drop unused Elementor/ElementsKit modules), critical-CSS, and re-test Core Web Vitals on mobile in Search Console.

Enterprise-readiness checklist

- | | |
|---------------------------------------|--|
| ✓ HTTPS, HSTS, security headers | ✓ Social profiles linked (LI, X, FB, IG) |
| ✓ Consistent NAP + business schema | ⚠ Named leadership & team bios |
| ✓ Contact form on every service page | ⚠ Certifications / partner badges shown |
| ✓ Clear service taxonomy (6 families) | ⚠ Real case studies / client logos |

✗ Blog / insights / thought leadership
✗ Trust numbers consistent & verifiable

✗ Demo/template content removed
✗ Optimised, next-gen media

§6 Schema, E-E-A-T & the missing blog

Structured data

Valid `Organization`, `WebSite`, `BreadcrumbList` and `ProfessionalService` JSON-LD are present, with full NAP and social `sameAs`. Two issues:

Self-serving `aggregateRating` (4.8★ / 144)

Google's review-snippet policy disallows a business marking up its own aggregate rating unless those reviews are genuinely collected and shown on that page. Best case it's ignored; worst case it's a manual-action risk. It also conflicts with the "765+ clients" figure elsewhere.

Fix: either display the real reviews on-page, or remove `aggregateRating` from the schema. Unify the client number sitewide.

Missing local-SEO fields

No `geo`, `openingHours` or `priceRange`. For "cyber security company in Ahmedabad", a complete profile + Google Business Profile is a quick ranking win.

Fix: add the fields (corrected JSON-LD is in the fix pack) and create/verify a Google Business Profile matching the NAP exactly.

E-E-A-T (Experience · Expertise · Authority · Trust)

SIGNAL	STATUS	RECOMMENDATION
Named authors / experts	Missing	Author bios on About + future blog posts; show real people.
Certifications visible	Weak	Cited in body text only — add a badge strip (OSCP, CEH, ISO 27001 LA, CPENT).
Case studies / outcomes	Missing	Publish anonymised results; retire demo projects.
Third-party proof	Weak	Client logos, Google reviews embed, memberships.
Contactability / NAP	Good	Phone, email, address consistent in schema & footer.

The biggest growth gap: no informational content

There is **no blog, insights or resources section anywhere** — no post sitemap exists. Cybersecurity buyers search informationally long before they buy. With 43 commercial pages and zero supporting content, the site can only compete on direct commercial queries against far stronger domains.

Recommended content clusters (India-focused, lower competition, each interlinked to its matching service page):

- SEBI CSCRF — applicability, deadlines, checklist
- "What is VAPT" — scope, process, pricing factors
- DPDPA — what companies must do, consent, breach rules
- ISO 27001:2022 implementation guide

- RBI cyber-security framework for banks & NBFCs

- Incident-response readiness / ransomware playbooks

§7 Prioritised remediation roadmap

Sequenced by impact-to-effort. A ready-to-apply fix pack (mu-plugin, .htaccess redirects, copy, schema, apply guide) accompanies this report in the repository's `seo-fixes/` folder.

Phase 1 — Foundation (Week 1) Critical

#	ACTION	DELIVERABLE
1	Noindex + drop theme junk from sitemap (mu-plugin / Yoast content-type settings)	~45 URLs de-indexed
2	Delete all demo "projects" incl. the <code>-copy</code> duplicate	Clean portfolio space
3	Build a real <code>/services/</code> hub page; repoint nav; fix trailing-slash links	Pillar page live
4	Replace 1.9 MB GIF: SVG logo + static 1200×630 og:image	Clean social previews
5	Fix misspelled slugs/titles (Assesment, readiness, SOC-as-a-Services) + 301s	Credible URLs

Phase 2 — Content & media quality (Weeks 2–4) High

#	ACTION	DELIVERABLE
6	LiteSpeed image optimisation on → WebP + compress 604 legacy files	~60–80% payload cut
7	Alt-text pass across all pages (homepage first)	Accessibility + image SEO
8	Expand the 6 thin parent pages to 500–700 words each	Stronger hubs
9	Rebuild About: leadership, certs, stats, client logos	Enterprise trust
10	Unify trust numbers; fix/remove <code>aggregateRating</code> ; rewrite testimonials	Consistent proof
11	Add missing meta descriptions; retune long/short titles	Better SERP CTR

Phase 3 — Growth (Month 2+) Strategic

#	ACTION	DELIVERABLE
12	Launch blog with SEBI / DPDPA / RBI / VAPT clusters, interlinked to services	Top-of-funnel traffic
13	Publish 3–5 anonymised case studies	Bottom-funnel proof
14	Move training courses to a <code>/training/</code> silo with Course schema	Cleaner taxonomy
15	Google Business Profile + review collection (Ahmedabad)	Local pack + verifiable ★
16	Performance pass: cut scripts/styles, critical CSS, measure CWV	Core Web Vitals green

Projected outcome: completing Phases 1–2 alone should lift the overall grade from **C+ (62)** toward **B+ (82)** — the index cleanup, media optimisation and hub/About improvements address 8 of the 10 lowest-scoring categories. Phase 3 is what moves the site from "credible" to "category-leading" in Indian cybersecurity search.
